# **SPEED**Pad Printing Machine

PAD PRINTING MACHINES ACCESSORIES SERVICE

The fastest clocked pad printing machine on the market Electromechanical drive High number of parts, highest registration accuracy

### Standard Pad Printing Machines

### **SPEED** Series

There was a need for coming up with a new pad printing machine, the basis of which opens up new target markets for us both technologically and in terms of applications. This has cut down flat-bed printing's negative distance in performance to rotary printing in terms of part output.

The result: the development of the SPEED 40-2 pad printing machine. Its output: as many as 9,000 cycles/h in continuous run. The production quantity is max. 18,000/h printed parts (single color with a printed image size of  $\emptyset$  37 mm). Very high true-to-register printing, precision contours and photo and line images.

The **SPEED** is a built-in execution, suitable for any kind of clocked, linear or rotary transfer systems. Thanks to its integrable misprint device there is no stopping of the machine in the absence of a workpiece.

The power costs are low in comparison to the cycle number (part output). The **SPEED 40-2** is a fast shortstroke machine of a new series of pad printing machines.

No other pad printing machine on the market offers these benefits.

SPEED 40-2 Housing cover made of stainless steel

# Focus on productivity

With pad printing it becomes dosable

### Technology

## **SPEED** Series

#### Standard Pad Printing Machines

## **SPEED** Series

SPEED 40-2 Automation with 4-fold use 36 000 parts/h

SPEED 40-2 Automation for small parts with rotary index table

#### Scope of supplies

Ink/doctoring cups
Hold-down bridge client-specific version
Pad bridge client-specific version
Assembly table
Gripping tongs
Printing pads
Tools and accessories set
Technical documentation

#### **Accessories & Options**

Machine stand made of aluminium profiles
Frame made of steel, closed, with angle table
Aluminium cross table for the positioning of jigs
Mounting plate for jig
Misprint device
Overhead model
