*Inkjet Clear Film
for Computer-to-Film (C-t-F) Application*

1. DESCRIPTION

- **FOTECFOIL 7800** has excellent dimensional stability and is therefore most suitable for the different production of films. Such films need the highest demands for the exposure of screen process stencil materials with **FOTECOAT** emulsions or **FOTECAP** capillary films. In addition they can be used with the indirect film system **FOTECFILM**.
- **FOTECFOIL 7800** is coated on the print side
- The necessary density to expose screen process stencils can be reached with a correct linearization of the inkjet printers.
- **FOTECFOIL 7800** can be used for the production of positive or negative films and for the colour separation in the exposure process of screen process stencil materials.

2. CHARACTERISTICS

- Goode humidity resistance
- Fast ink drying
- Good definition and density
- The UV-denisty depends on the RIP installations, the ink system and the spectral characteristics of the densitometer.
- The dot reproduction depends on the RIP
- **FOTECFOIL 7800** is anti-static
