Varitec GE

Automatic Screen Reclaiming System
with shutter door and backlit wall

Manual screen reclaiming is a post-press area that is labour intensive, potentially hazardous and undoubtedly expensive. Government regulations and common-sense principles for modern human working procedures will be required in the future for all post-press processes, including screen reclaiming. Uncontrolled use of chemicals and extremely high fresh water consumption with manual reclaiming increases pollution and is cost intensive.

The VARITEC GE addresses these problems with hermetically enclosed stainless steel processing chamber, shutter closed front opening, microprocessor control and by means of applying the latest environmental technology.

Varitec GE

Automatic Screen Reclaiming System
with shutter door and backlit wall

Non-abrasive "touch-free" but effective degreasing, reclaiming and developing is carried out by means of a specially designed spray bar system.

Screens of different sizes are loaded through the spaciousness shutter-closed opening, the shutter is opened and closed by a motor-driven device.

VARITEC GE offers various programs for reclaiming. Programs and program number are freely selectable and programmable via the touch display. The touch display is user friendly.

The easy visual checking of the reclaimed screens is guaranteed by the yellow backlit wall.

The VARITEC GE is also available with the optionally developing device!

The VARITEC GE is available in many standard sizes and all customized sizes up to 15 x 33 feet.
